AUTOMATION OF THE CAR RENTAL BOOKING SITE

-John Daniel

URL: https://www.economycarrentals.com/en-us

CODE LINK: https://github.com/Johndaniel98/Car-Rental

DESCRIPTION

Nowadays booking rental vehicles online is common and there are a lot of sites available for that. In this project, we are going to automate the process of booking a vehicle from an end-user perspective. The locators used here are more often used ID and XPath. Here drop-down, calendar, checkbox, links, fillups, buttons everything that a user do to book a car has been automated.

PROJECT SPECIFICATIONS

LANGUAGE: JAVA

AUTOMATION FRAMEWORK: Selenium web Driver

TESTING FRAMEWORK: TestNG

INSCOPE

Here everything a user can do to book a car has been tested starting from selecting country till the payment.

OUT OF SCOPE

Other than a normal booking, no external links, going back to the previous page and changing the details, editing the given info in the middle of the booking are not tested.
